

BKK ECO

Ecological, transparent water-repellent coating (such as **BKK Eco**), based on siloxane in water, suitable for protecting absorbent walls of brick, stone, cement, etc. from rainwater infiltration. It does not alter the appearance and colour of the masonry, it protects against frost, blocks the penetration of humidity and guarantees the evaporation of the water in the wall. Unlike traditional solvent-based solutions, BKK eco is a completely water-based product, not dangerous for the environment and for people's health, both during the application phase and after curing. Minimum required characteristics: Breathability $\mu=7$; Weathering Test 1680 hours (>10 years); UV-rays resistance – 680 hours without evident variations.
